“Live Streaming video from your mobile”

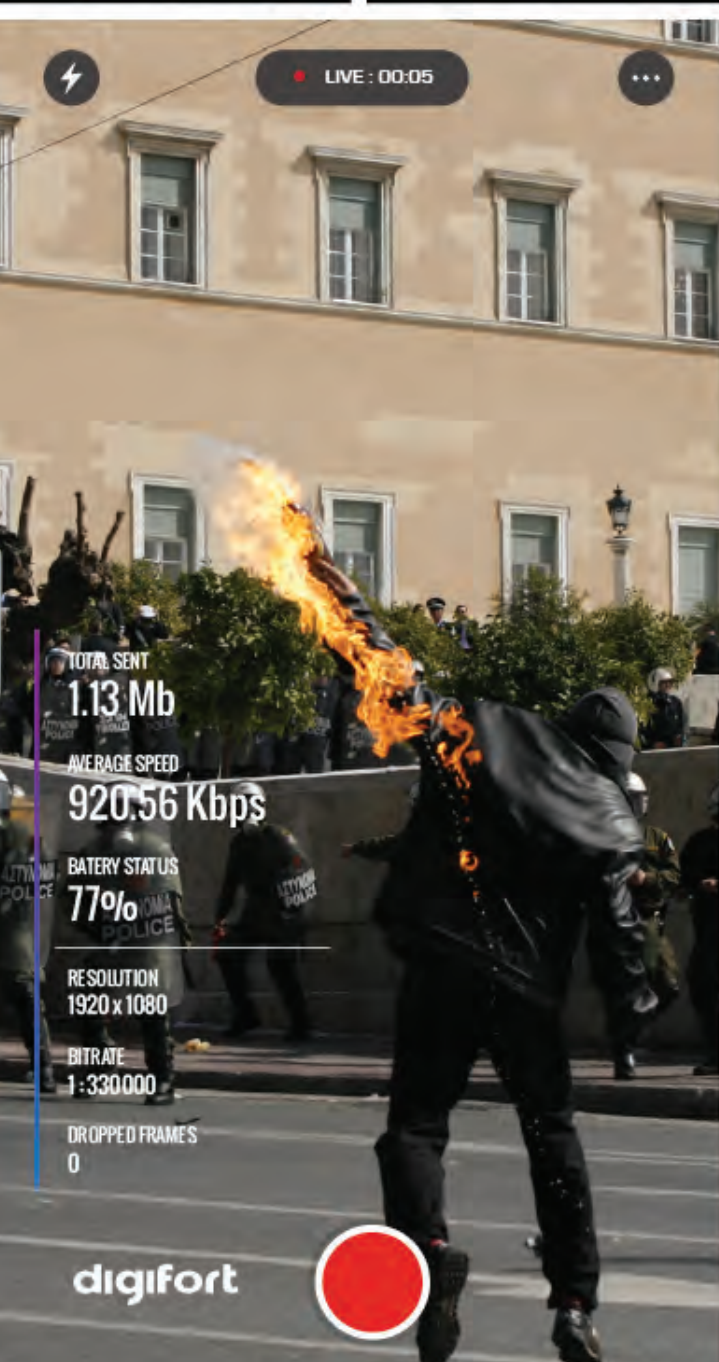

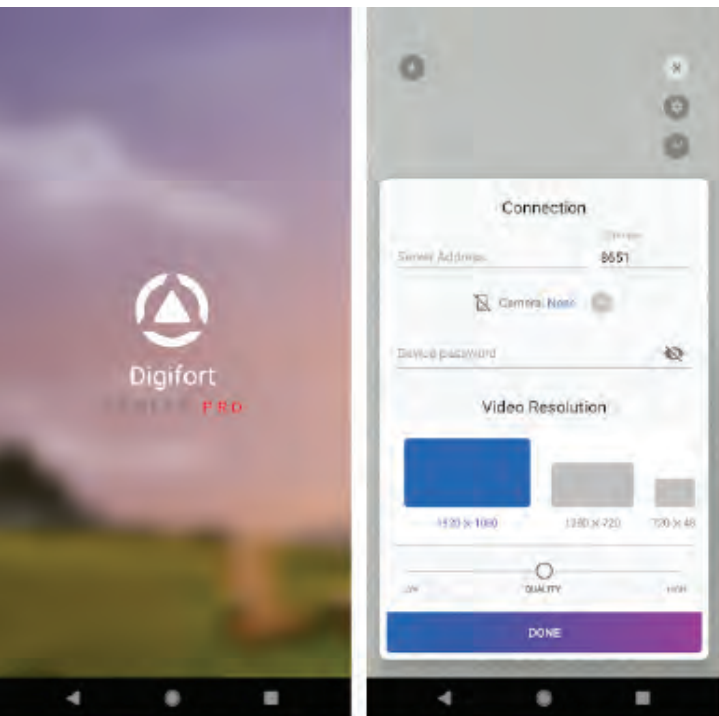

TURN YOUR MOBILE INTO REMOTE CAMERA

Digifort Mobile Camera Pro turns your mobile device into a remote camera to be used with Digifort IP Surveillance System. With Mobile Camera Pro you can stream live video using the camera from your device to Digifort using wireless or 3g/4g connectivity. The streamed video can be recorded and the footage can be reviewed using Digifort Surveillance Client.

APP FEATURES

- ✓ Stream live video from your device to Digifort System
- ✓ Stream native Full HD (If supported by device) H.264 video with audio
- ✓ Video can be streamed using wireless or 3g/4g connectivity
- ✓ Allows the selection of back or front camera
- ✓ Allows the selection of the image resolution
- ✓ Allows the selection of image quality (Compression)
- ✓ Allows the use of Flashlight
- ✓ Easy to setup and use

The use of CCTV has exploded over the last few years and technology has been evolving at quite a pace. We are seeing an increasing number of security solutions now integrating deep learning analytics, facial recognition, multi-sensor and multi-directional motion detection, as well as innovative and alternative uses of the technology.

As mobile phone technology continues to improve, people have been able to construct their own CCTV security systems using the devices. There are literally hundreds of CCTV apps available on the market. It connects to security cameras to feed the stream to mobile devices, alerting the end-user. This solution allows businesses to view the live footage on their own devices.

MOBILE DEVICE PLAYING A KEY ROLE IN SECURITY SYSTEM
